

## 22. Model for clinical cases to write

Copyright Dr Pascal Vidal. This document is the property of the Institute of Photonomedicine and may not be reproduced or circulated without permission.

You will need to write 4 clinical cases for the next module, each one having received 4 sessions (unless the full treatment requires less).

A clinical case description should contain several important informations:

- Age of the patient, the reason of his consultation, his problem or diagnosis
- His medico-surgical previous problems
- His treatments
- The results of the investigations done (better if Xray, ultrasound, MRI, CTScan reports or blood results can be attached to the file)
- Photos of the condition at the beginning and during treatment could be attached, as they may show the evolution.

- What were your findings in your first exploration with Green 53: what was the VAS profile and which organs were reacting?
- Which colors do you use and why?
- Which ear points or zones did you treat and why? (you can attach a ear maps pointing the treated areas)
- What was the frequency of sessions?
- How was it evolving from one session to another?
- Side effects? Sensations described by the patients during the sessions and in between them?
- What was the clinical evolution?

- What are the results of your treatment?
- How do you see the evolution of your patient and if more treatments are needed, according to you at which frequency are they required?
