

# Return on Investment Calculator

(Sorry for the algebra, y'all!)

Amount you spent = A

$A \times 5 = B$

B= a good amount

Now let's look at this in terms of private practice...

If you spend \$174 for a 6- month listing with Inclusive Therapists, you should hope to make \$1,044 from that listing.

If you charge \$150/session, you will make that in 7 sessions.

(NOTE: sessions, not clients)
